

*Firenock Review by Shad Beaty May 27, 2008*  
*Firenock GSH (GS)*

I just wanted to drop you a quick note regarding the new Firenock GS. They showed up in my mailbox 3 days after I ordered them (great service as always) and have impressed me greatly so far. They have turned on without failure with every shot I've taken. I even missed my target a couple of times and hit 3/4" plywood, but they performed flawlessly. I used the original firenocks last year and was amazed at the difference they made in my target shooting and hunting. Being able to visually follow the arrow path to its point of impact and then the simple recovery of your arrow after pass throughs while hunting is priceless. These new GS Firenocks are even better than the originals. I really like the fact that I didn't have to put a magnet or anything else on my arrow rest to activate the new GS Firenocks. The acceleration switch and the durability of your product have placed the new GS firenocks in an entirely different league than the other illuminated nocks on the market. Thanks again for a great product that has vastly improved my shooting and hunting.
