

Firenock Review by Daniel Sochor, 10th September 2008  
Firenock GCH, GSH, GST (GC, SU)

I just wanted to let you know how satisfied I am with your products. I put Firenocks on my crossbow bolts and on my hunting arrows and they perform flawlessly. They are bright and always come on upon release. It isn't often that you find a product that lives up to it's hype, but I believe your company has indeed established itself as being premier in the lighted nock industry.

The only thing I have noticed is that the drop required to turn the nocks off seem to be more like 3 feet most times. I imagine that maybe the surface I'm using is not semi-hard enough. (my boots).

One last thing, I purchased the SU pack because I was expecting the nocks to light up in different color when a green or blue nock was used. Maybe I didn't read through the product specs well enough. I imagine the tips of the bulb must all be painted red inside. The light is always red and that the only purpose for having the different colored nocks is for easy identification when target shooting with other archers. Had I known that, I would have just ordered two three packs in red. I prefer a light that stays on over a 15 second target nock. I just thought that was the only way to get the green nocks.

Other than that, you have an excellent and reliable product. I look forward to using it in the field.

Thanks again.  
Daniel Sochor

note. The harder the surface the shorter the dropping distance. On leather boot, 3 feet is within reason.
