

Firenock Review by Anthony Godsey 15th October, 2008 on ArcheryTalk.com
Firenock GSH (GS)

Since Saturday (October 3rd, 2008) my one Firenock has been through the following since 9/27/08.

- 1 Buck
2. Stuck into the tree behind him
3. The doe I just killed
4. Set in the pouring rain last night

IT STILL WORKS FLAWLESSLY

This just happened Sunday, October 11, 2008, I shot a buck straight below my stand. The arrow hit the sternum so hard it shoved my Firenock down the shaft where the deer pumped it full of blood. I tried to find my Firenock and couldn't until I looked down the broken shaft. It was still glowing with clotted up blood all over it. I took it out of the bloody shaft and disconnected the battery and put it in the back of my truck. I got it home and washed it off, installed the battery and it worked the same as if it was new. That is a good solid product.
